

## **CALL FOR PAPERS: 2013 COGSCI/ISSUE THE CHALLENGE OF INTEDISCIPLINARITY**

Dear readers,

of all the areas where interdisciplinary thinking, research, and collaboration are most vitally needed, cognitive science is surely one of the foremost. Is it cognitive sciences or cognitive science? The question remains open, and depends on success of interdisciplinarity cooperation. It is widely believed that only synergy between different disciplinary perspectives can provide a full understanding of cognition-related phenomena. In recent decades, there have been many attempts of cross-disciplinary research, but mostly only between closely related areas, and many times not on equal grounds.

The 2013 CogSci issue of INDECS is going to focus to many open questions, related to interdisciplinarity. Among them:

- Different understanding of basic concepts
- Integration of discipline-specific viewpoints
- Methods of collaborative research
- The possibility of integrated knowledge
- Reduction and emergence
- Explanatory gap

We are inviting submissions of papers covering theoretical issues as well as examples of interdisciplinary empirical research.

Deadline for submissions is 15<sup>th</sup> September.

Cordially,

Ljubljana, May 2013
